

Preventing the spread of invasive species

10. Utilise the IAS course material package produced by The Finnish Association for Nature Conservation

PHOTO FANC

As part of the Finvasive LIFE project, The Finnish Association for Nature Conservation produced a set of educational IAS lecture materials for undergraduate students in horticulture as well as natural and environmental protection.

The materials are also suitable for other nature-related study fields and as continuing education.

Benefits of the action

By training current and future professionals working in IAS spreading pathways, it is possible to effectively avoid the spread of IAS when working in construction or green space maintenance.

Do this

Get to know the course materials and utilise them for IAS orientation of municipal staff.

You can also suggest for municipal subcontractors to go through the materials.

You can also utilise the topics of the lecture for municipal IAS communications.

More information

You can find the course materials (in Finnish) in the Finnish IAS portal:
